Includes ONE attendee to view the program for 30 days and will receive a Certificate of Completion once you have viewed the entire series.

Why you should watch this program?

- Enhance Practice
- Improve Outcomes
- Decrease Health Care Acquired Infections
- Protect Staff

This 3-hour series will focus on Home Care and Hospice Infection Control practice basics. Participants will be able to understand clinical practice protocols as they relate to decontamination of equipment, critical and non-critical items, use of waterless hand washing solutions, disinfection and much more. This is a universal program that applies to **ALL** states. You must complete the entire series in order to receive a Certificate of Completion.

The training focuses on six core elements:

1. The responsibility to adhere to scientifically accepted principles and practices of infection control and monitor the performance of those for whom the professional is responsible.
2. Modes and mechanisms of transmission of pathogenic organisms in the home healthcare setting and strategies for prevention and control.
3. Use of engineering and work practice controls to reduce the opportunity for patient and healthcare worker contact with potentially infectious material for bloodborne pathogens.
4. Selection and use of barriers and/or personal protective equipment for preventing patient and healthcare worker contact with potentially infectious material.
5. Creation and maintenance of a safe environment for patient care through application of infection control principles and practices for cleaning, disinfection, and sterilization.
6. Prevention and management of infectious or communicable diseases in healthcare workers.

WHO SHOULD ATTEND: This series is ideal for CEOs, COOs, Compliance Officers, Directors, Managers, Supervisors, Director of Patient Services, and all levels of Clinical Practitioners.
